driven by excellence

A busy road is a **punishing environment that requires a durable and deformation-resisting asphalt.** Not only that, but the asphalt may need to possess numerous other qualities such as: low noise, skid-resistance or spray reduction.

Our highway asphalts can be tailored according to each precise situation. And as time is so often of the essence, these asphalts are designed for quick installation so there is minimal disruption and traffic can soon return to normal.

Tarmac supplies all this – and more.

keeping the nation moving

Technical advances led by Tarmac mean that fewer roads than ever need to be closed for work to be done, and that work is completed quicker and with less disruption. Our innovative range of products helps you to keep your promises to road users and to hit – or beat – your targets.

Ever more demanding schedules mean that you need asphalt that can be laid quickly. You also need deliveries to be made on time,

and from a reliable manufacturing plant. Tarmac's size and extensive geographical coverage means we can condense programme times, thus minimising contract times and reducing delays.

the art of travel

When drivers steer their cars down a **highway surfaced with Tarmac asphalt**, they take a lot for granted.

Noise reduction, for example: our specialist asphalts are some of the very quietest available, which benefits both drivers and local residents. Or skid resistance: Tarmac's asphalts increase skid resistance and decrease the chances of accidents occurring.

Then there's spray reduction and fuel resistance – qualities that make a big difference to the road user and make the highway environment safer for all. The use of coloured asphalt from Tarmac can also make a driver's life easier, by highlighting areas of possible danger and therefore decreasing the potential for accidents.

drivers may take their **safety and comfort** for granted. We don't.

keeping you safe

In the potentially dangerous highways environment, the authorities have set rigorous safety standards – and rightly so. Tarmac's safety standards are even tougher. We set harder targets aimed at eliminating accidents and lost-time injuries on site and we work relentlessly to meet those targets. As well as insisting on safety measures such as delivery lorries

having reversing cameras, we believe that by delivering on time and supplying the right product first time, we take the pressure off those people working on the highways. When work has to be done under pressure and in a hurry, accidents can happen. Tarmac's target in all its businesses is to reduce the number of accidents to zero.

superior surfaces

Our unrivalled commitment to researching and developing new products means our range is constantly evolving in line with our customers' needs. In response to customer demands, we developed the UK's first BBA HAPAS-approved thin asphalt surfacing and now have a range of thin surfacing options which combine performance with cost-effectiveness.

The environment also benefits from these surfaces as they use less material than conventional solutions. In fact, ecological issues are always at the forefront of our thinking when developing new products and processes. For example, we have developed an asphalt that utilises planings from the existing surface, which through a cold-mix process produces a recycled product effectively re-using the old road.

many of our products are **BBA certified** to ensure **peace of mind**.

unique approach... unique solutions

The reason Tarmac is able to offer so **many asphalt solutions** is that we listen to you, our customers, and **understand your issues**.

We are often asked for guidance or our opinion, simply because our people have enormous experience and knowledge. We're more than happy to come on site to discuss your requirements.

This consultative approach means we can work together with our customers to choose the best asphalt to meet the requirements of each job. We'll discuss options and alternatives and explain the reasoning behind our suggestions. And if it's a genuinely unique job that needs a totally unique solution, we can go back to our laboratories to develop one for you.

We understand that circumstances often dictate that you need both conventional and specialist asphalts, and we are ready to supply these.

delivering quality

Tarmac has **locations nationwide**, which means we can handle high volumes and also **keep delivery times to a minimum**.

We have a fleet of modern trucks, the vast majority of which are under three years' old and are fitted with the latest insulation that keeps the asphalt hot on site. And because we understand how our customers work, deliveries are available at all times, including at weekends and overnight.

Our extensive plant coverage ensures we can be flexible and respond to accommodate unforeseen changes in your program. Continuing to deliver on time.

Tarmac asphalt products for highways applications: Masterpave, Masterdrive, Masterflex, Masterhalt, Masterhalt P, Mastertint, Mastertint Chippings, Mastershield.
