Although Tarmac Limited does its best to ensure that any advice, recommendations or information it may give is accurate, no liability or responsibility of any kind (including liability for negligence) is accepted in this respect by Tarmac Limited, its staff or agents. Claims and statements made by Tarmac Limited regarding its products refer to those which have been properly handled on site. Tarmac Limited cannot accept any liability or responsibility of any kind (including liability for negligence) for problems caused by the acts or omissions of third parties or by poor site practices.

the perfect finish

The intensive demands made on sports and leisure surfaces can only be met by asphalt that carefully balances a range of attributes. **Durability is crucial where any leisure activity is concerned, as is consistency.**

Tarmac's sports and leisure asphalts can also offer **low-maintenance and excellent drainage** to make sure as many people as possible can use the facilities without them requiring constant attention. This range of innovative surfaces means that **there is an appropriate asphalt for every situation and every standard:** public or private, professional or amateur, heavy or occasional use.

strength and endurance

Outdoor sports and leisure facilities have to take some serious punishment, not only from users of the facilities but also the ravages of the weather. Tarmac produces exceptionally strong asphalt with all the appropriate qualities – permeability, fret-resistance and extra hard-wearing – to withstand the punishment.

Whether single use or multi-purpose, there is an asphalt for the job – including a top quality surface for tennis courts which is approved by the Sports and Play Construction Association (SAPCA).

These asphalts require little maintenance but can withstand rigorous cleaning, while still maintaining their consistency and evenness.

meeting different demands

As well as helping you choose an asphalt to meet the demands of its users and the challenges of the weather, we will also work within the criteria laid down by relevant governing bodies and sports associations. We are experienced in providing the surfaces demanded by professionals, as well as the multi-use surfaces required by the recreational market.

Our advice on which asphalt to use will also depend on the surface on which it will be laid. We have specific products that work in particular locations and we will inspect the site carefully to ensure the right one is chosen. Similarly, we know which is the right asphalt for underneath other surfaces, such as artificial turf.

And don't forget colour. Our coloured asphalt and coated chippings are ideal for livening up a recreation area or for marking out different courts and pitches. As the colour runs right through the asphalt, you also won't suffer from the unwelcome sight of fading or peeling paint.

a high standard

We are able to undertake very specialised applications and are always willing to draw on our expertise to devise unique solutions. For example, we've even developed an asphalt specifically for velodromes. Our research and development team

created both the material and the application process, overcoming a series of complex challenges. Whatever the application, Tarmac has the answer.

Tarmac asphalt products for sports and leisure applications: Courtmaster Advantage, Courtmaster Pro, Playmaster, Playmaster Extreme, Mastertint, Mastertint Chippings, Mastertrack.
